4:Digital Agronomist,mahabaleshwar

Details:

Digital Agronomist, India

We at Yara are part of a global network, collaborating to profitably and responsibly solve some of the world's key challenges - resource scarcity, food insecurity and environmental change.

About the Unit

About Agronomy and R&D

The unit is responsible for all R&D and agronomic competence within the company. Its objective is to develop and to strengthen Yara's knowledge regarding Crops, Agronomy, and sustainable agriculture. It also leads the agronomic input and requirements regarding the development of new and innovative Products, Services and Tools.

About the Agronomic Recommendation and Tools team

Within the Agronomy and R&D unit, the Agronomic Recommendation & Tools team takes responsibility for the development of agronomic strategies and know-how for innovative crop management concepts and decision support systems. It scouts emerging technologies in global AgTech and develops tools and algorithms that enable data and science driven decision making, both in professional and smallholder farming. Being responsible for the agronomic quality assurance of all offerings, the team works in close cooperation with Crop & Digital Solutions and the Agronomic network in Yara.

Responsibilities

- Agronomy knowledge is at the core of Yara's digital solutions. We are looking for an agronomist to be at the forefront of validating the feasibility, desirability and viability of our digital solutions towards smallholder farming communities in India
- Be part of a YARD team that apply design thinking and agile practices to support agronomic recommendations to achieve our goals
- Using your existing strong knowledge and understanding of crops, traditional farming practices & smallholder farmer challenges, your role is to 'localise' Yara's existing knowledge bank into actionable insights for farmers

- You will provide the content and strong local guidance to make our solutions both practical, scientifically sound and relevant for Indian farmers
- Working closely with industry stakeholders, local experts and farmers to ensure solutions meet the needs of our users
- You will be actively involved in developing digital farmer solutions from ideation to product roadmap & strategy, service design & user experience and in-field validation, ensuring concepts are fit for release by ground-truthing

5. Senior Specialist - Agriculture Research & Development (Seed System & Product Management)

Details:

About IRRI

The International Rice Research Institute (IRRI) is the world's premier research organization dedicated to reducing poverty and hunger through rice science; improving the health and welfare of rice farmers and consumers; and protecting the rice-growing environment for future generations. IRRI is an independent, nonprofit, research and educational institute, founded in 1960 by the Ford and Rockefeller foundations with support from the Philippine government. The institute, headquartered in Los Baños, Philippines, has offices in 17 rice-growing countries in Asia and Africa, and over 1,000 staff.

Working with in-country partners, IRRI develops advanced rice varieties that yield more grain and better withstand pests and disease as well as flooding, drought, and other harmful effects of climate change.

Job Purpose

Assam Agri-business and Rural Transformation Project (APART) aims to improve food and livelihood security of poor and marginal farmers, including women and youth in Assam by providing and increasing access to up-to-date and timely knowledge and technologies, and empowering the farmers for effective decision making, thereby closing yield gaps and increasing farmers' income, and the sustainability of rice-based systems. The consistent efforts is being made to develop and evaluate innovative modern and climate resilient technologies best suited for Assam environment and promoted in the 23 project districts to improve the rice based agri-food system in the state.

Roles and Responsibilities

- Support with managing partnership and collaboration for research and development work around seed system and product (varietal) advancement ensuring new products as well as innovative seed system models are piloted and scaled
- Manage and pilot collaboration around seed production related institutions (e.g. farmer producer companies, private and public enterprises, processing infrastructure)
- Design and execute collaborative research to evaluate, improvise or strengthen approaches / models across various project sites in India.
- Design and manage large scale on farm trials/demonstrations on varietal evaluation and validation and strategizing and executing promotion and awareness activities and knowledge events.
- Promote and manage various extension approaches to promote new varieties, create demand and awareness as well as establish market linkage
- Promote farmer participatory and market driven product positioning, scaling approaches

Qualifications

Master's degree in Agriculture Science/Agribusiness Management/Rural Management with minimum 5 years of relevant work experience around research & development work in seed systems, product management, rural innovation models, technology transfer/ promotion, or

PhD degree in Agriculture Science/Agribusiness Management/Rural Management with minimum 3 years of relevant work experience around research & development work in seed systems, product management, rural innovation models, technology transfer/ promotion

Skills Required

Mandatory

- Has strong business development skill and strategic partnership experience
- Has strong oral and written communication and scientific documentary skills
- Has strong organization and interpersonal skills
- Has experience of working with private sector and government stakeholders
- Has experience with gender and rural development approaches
